

# Content Cruiser User Guide

1. Upload plugin through your Wordpress Dashboard  
Plugins >> Add New >> Upload >> Browse

2. Add New Campaign

a. Enter your RSS feed URL in the field.

For Example, this first feed URL will pull in **every** post from the entire blog:

The RenoLabs RSS Money-Feed is:

<http://renolabs.com/vip/feed>

Want to pull in specific Categories only? You would enter the link to the category, followed by /feed.

Category Feed Example: Free

<http://renolabs.com/vip/category/free/feed>

Category Feed Example: List Building

<http://renolabs.com/vip/category/list-building/feed>

3. Next, select 'Draft' from the Post Status dropdown.

4. On the right side of the page, you will see the Update Every \_\_\_ Hours setting. This is how often the campaign will check for new content on the provided RSS feed. Every 6 or 12 hours should be fine.

5. On the right hand side of the page, right below the hour configuration, select the Category that you want new posts added to. Below that, select the number of posts to pull on each run. 2 or 3 should cover you for most feeds.

SAVE!

6. Now click on Campaigns in the left Content Cruiser Menu. Then hover over your campaign name, and click 'Run Now' to test the system. While running, you will observe a coded output on the top of the screen, and when complete just check your 'Posts' to see all the new content has been added according to your settings.
