Mobile Simulator Plugin - How to use
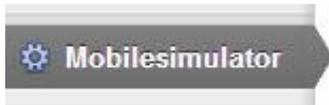

Installing

1. Go to your WP admin panel
2. Navigate to Plugins -> Add new -> Upload
3. Select the zip package and press Install

Settings

To change this plugin settings, for example select the phone layout:

1. Click Mobilesimulator in your admin panel menu

2.

How to use this plugin

1. Edit the page where you want to add this plugin.
2. Add *[mobilesimulator]* short code into the content area, just like this:

3.
4. Now save the page and test it. As a default there is iphone layout. You can select the layout you want in Mobilesimulator settings page.

Phone styles

There are 3 different phone layouts: iphone, nokia lumia 920 and samsung galaxy S3:

How to rebrand this plugin

1. Extract the .zip file
2. Open *mobilesimulator.php* in the text editor (for example notepad). You should see something like below.

```php
1   <?php
2
3   /*
4   Plugin Name: Mobile Browser Simulator plugin
5   Plugin URI: http://rebrandrights.com/
6   Description: To add the tool to any page, just put [mobilesimulator] s
7   Version: 1.0
8   Author: Alex Blades, RebrandRights
9   Author URI: http://rebrandrights.com/
10  */
11
12  /*==============================================================
13      // Admin interface for mobilesimulator plugin
```

3. Just edit those Author lines and URLs you like. After editing archive plugin files back to .zip package.
4. Now you can start selling that plugin with your own Author details.
