How to Integrate Aweber with TIMB PRO

This tutorial will show you how to setup the Aweeber Integration. You need to have the PRO version of the Turbo Instant Membership Builder. Also you need to first create a list in your Aweber account for the customers of your membership and then proceed with the steps below.

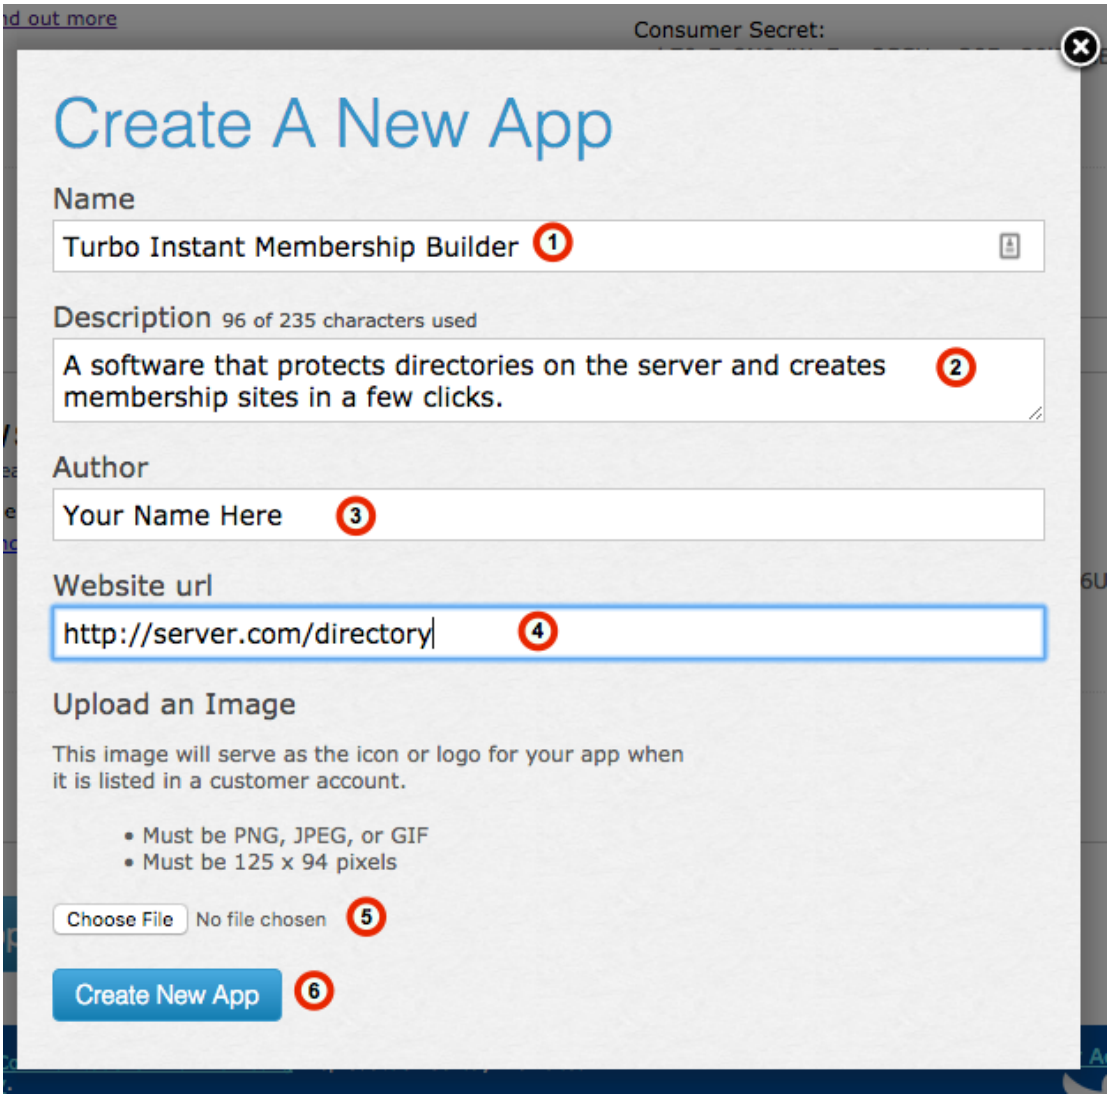
1 Login to Aweber Labs

Go to https://labs.aweber.com and either create an account or login to your existing account.

2 Create a new app

Scroll the page until you see the "Create A New App" button.

3 Fill in the form

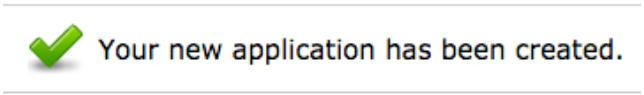


You may add your info (1) (2) (3) and also insert the URL of where you installed the software, ie. server.com should be replaced by your domain name and directory should be replaced by the title you used for the directory where you uploaded the software's files.

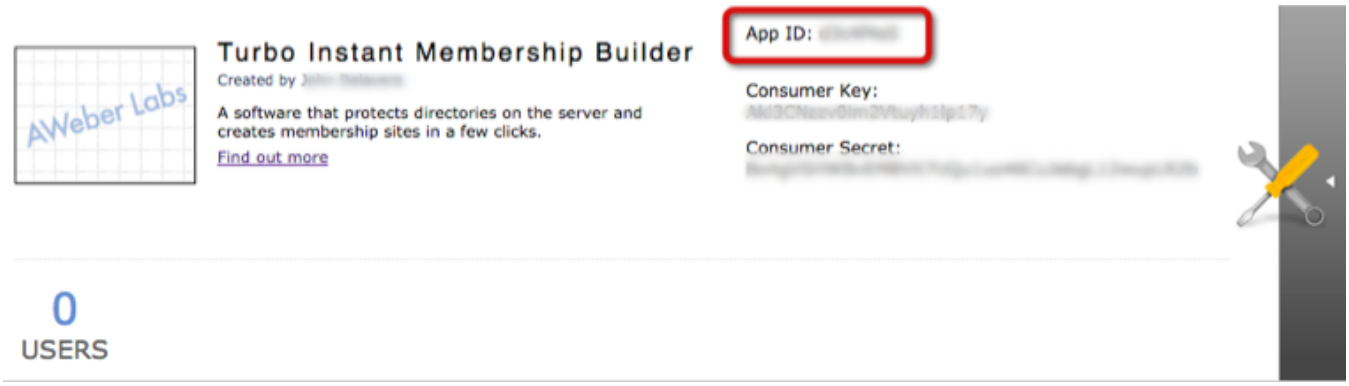
Since you'll be the only one to use the app there is no need to add any image (5)

Once done save the changes (6)

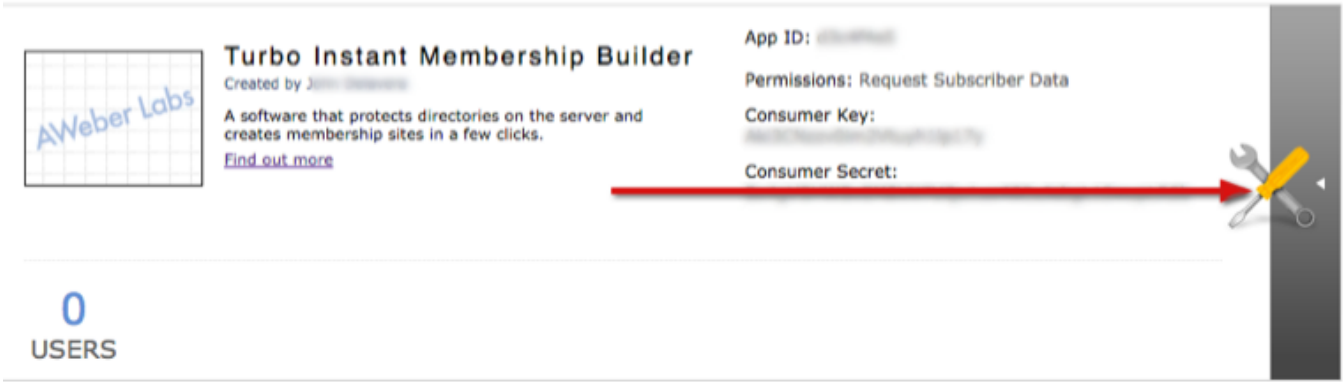
4 You will see a verification when all done.



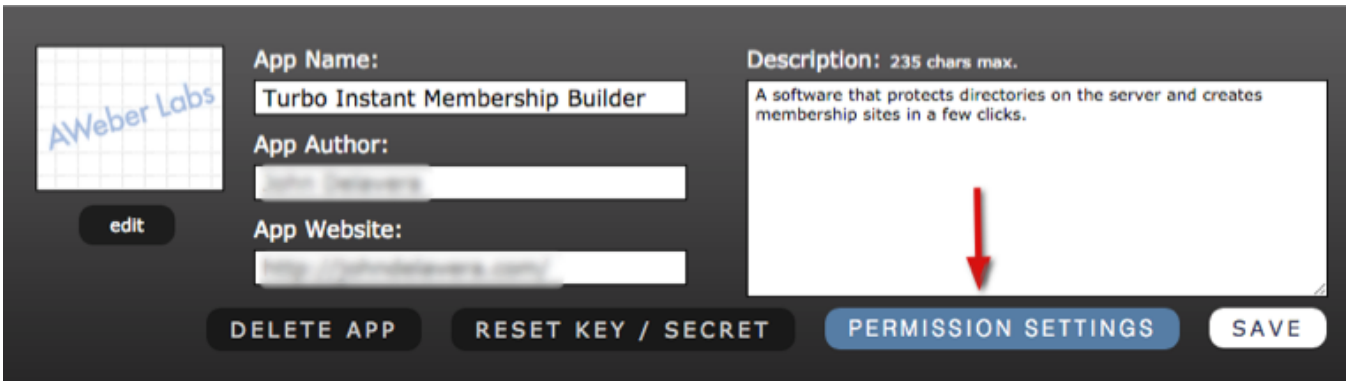
5 Write down the App ID



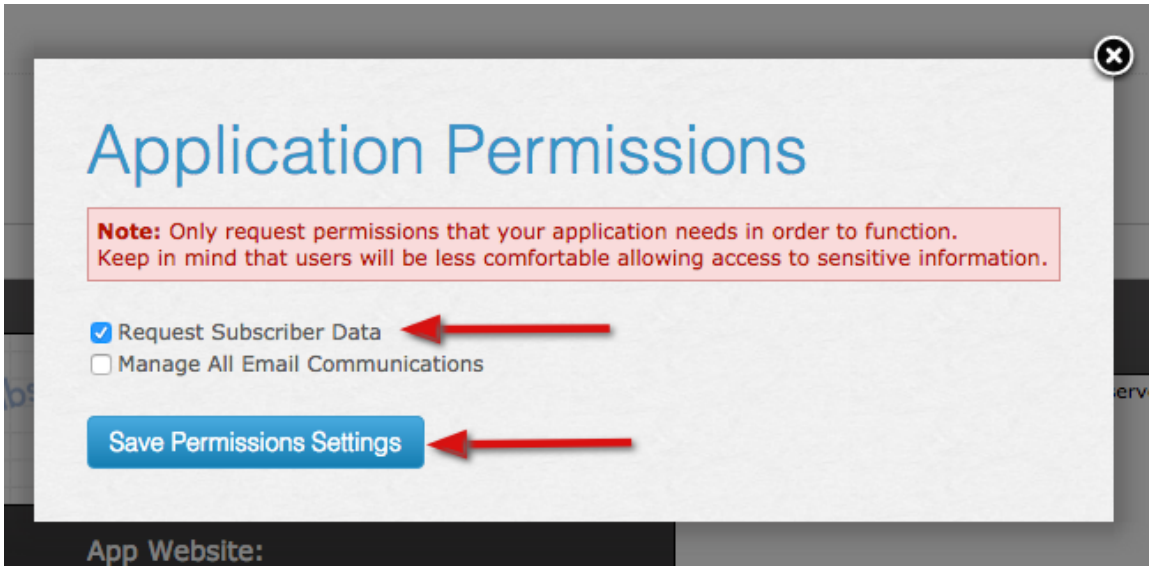
6 Click on the tools icon



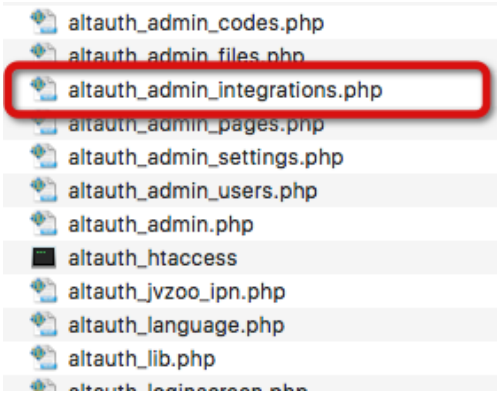
7 Click on the PERSMISSION SETTINGS button



8 Check the box and save the changes



9 Open the file altauth_admin_integrations.php



You need to edit altauth_admin_integrations.php before uploading it on your server. If you have already uploaded the file on your server then do the changes and re-upload it overwriting the existing one.

10 Add your own App ID

```php
<?php
require_once('altauth_lib.php');
require_once('altauth_language.php');
require_once('libs/aweber_api/aweber_api.php');

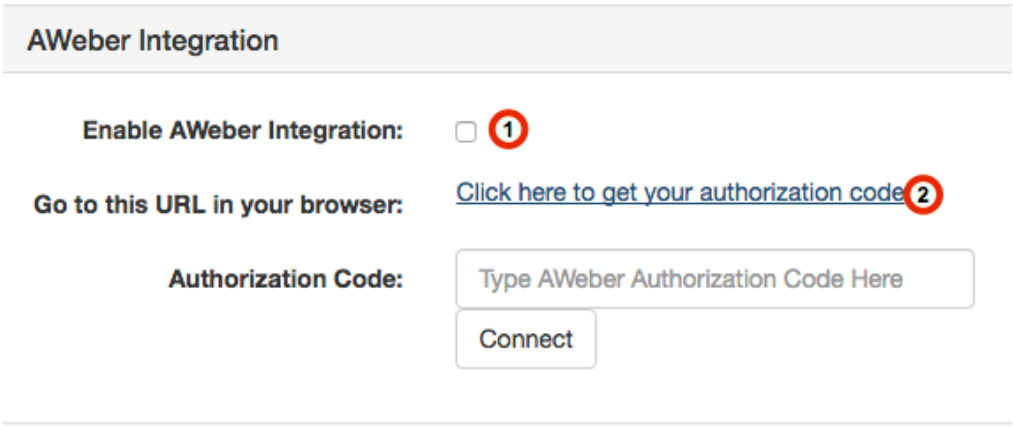
$appID = "YourAppID";

$integrations = load_integrations();
$jvzoo = load_jvzoo();
$aweber = load_aweber();

if(count($aweber) > 0) {
  $connected = true;
```

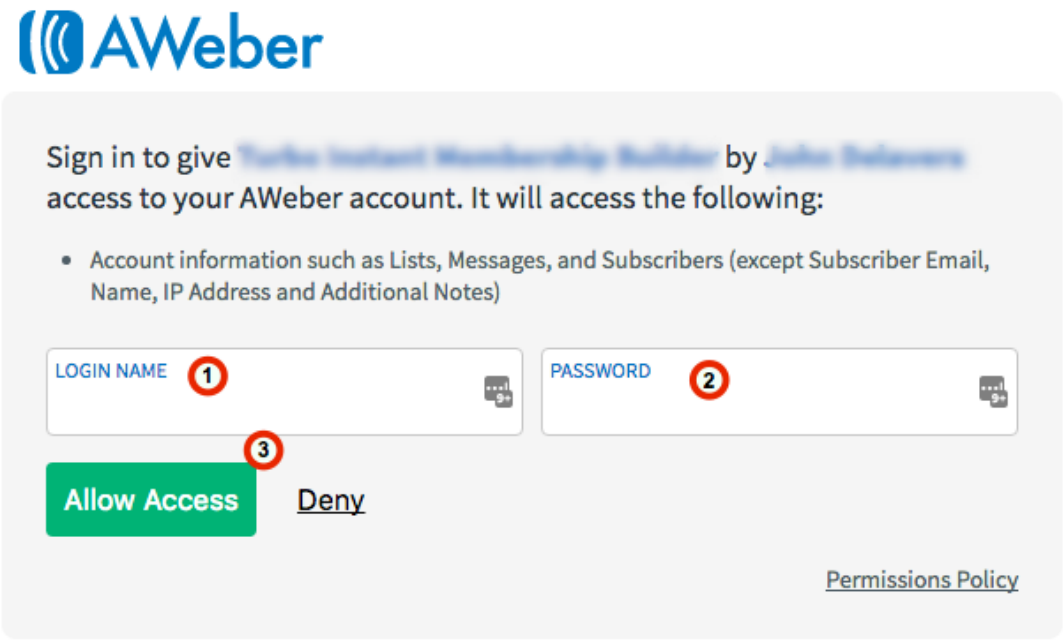
Change YourAppID with your application's ID.

11 Click on the Integrations' page and setup Aweber



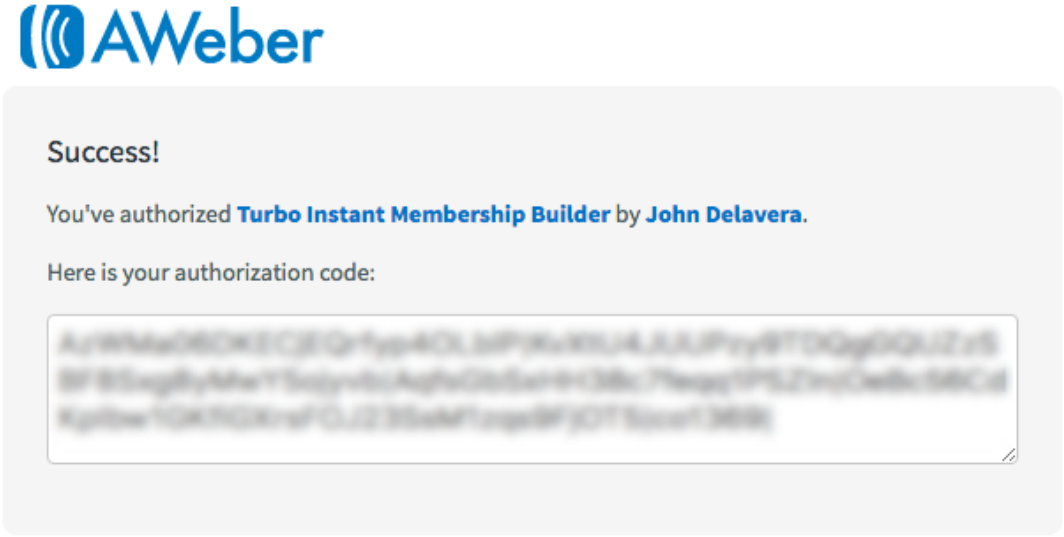
Check the box (1) and click (2) to get your authorization code.

12 Allow the authorization



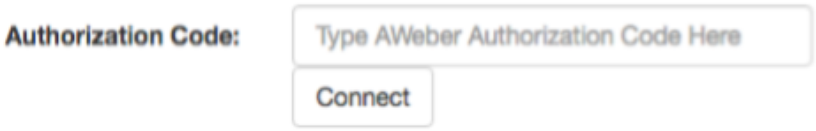
Login using your Aweber codes (1) (2) and click on the button (3) to allow the access.

13 Write down the the code



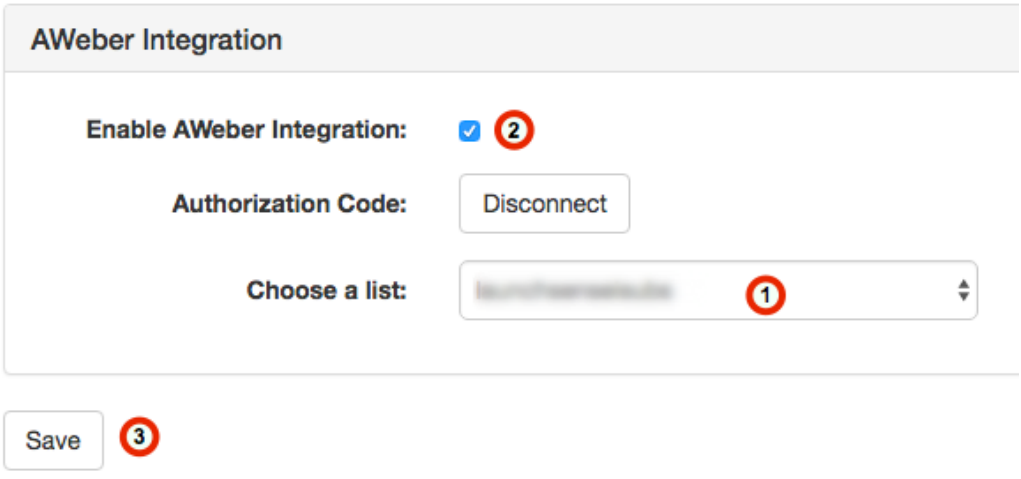
Copy the authorization code!

14 Paste the code



Go back to your admin area in the Integrations' page and paste (1) the authorization code, then click the button to Connect.

15 Select the list and Save



Select the list from the drop down menu (1), be sure to check the box to enable the integration (2) and save the changes (3)

16 ATTENTION: Aweber's limitations apply

AWeber Communications > Knowledge Base > Subscribers

Can Subscribers Using Role-Based Email Addresses Be Added To My List?

January 29, 2016 19:48

Yes, through a sign up form or by manually adding them. Whenever a subscriber attempts to sign up on your form using a role based email address, they will need to fill out a captcha element and confirm their subscription to be added. The captcha element would look similar to the following:

The integration will not work and will show an error message if the member tries to register by using one of the words not allowed by Aweber, like admin@ info@ etc. Please check this article https://help.aweber.com/entries/97662366 for more information.
